ACCENT RADIOFREQUENCY

'I want to slim down my saddlebags'

The treatment: Accent uses radiofrequency energy to tighten the skin, contour the body and reduce the appearance of cellulite. Using two handpieces, the machine heats the superficial skin tissue to tighten skin and encourage new collagen production, while also penetrating deeper fat to tighten underlying tissues, boost circulation and encourage drainage of the fatty deposits via the body's lymphatic system. The handpieces also cool and protect the outer layer of skin to ensure that the treatment is pretty much pain-free. Each treatment takes 30-40 minutes with eight sessions at 1-2 week intervals recommended for long-lasting results. From £200 per area.
